

Scaffolding: Find Equation Given Slope and One Point

Assignment: _____

____. Slope = \square (\bigcirc , \triangle)

*Substitute into Slope-Intercept Form: $Y = mX + b$ and solve for b.

$$\triangle = (\square \cdot \bigcirc) + b$$

$$\triangle = \underline{\hspace{2cm}} + b$$

$$\underline{\hspace{2cm}} = b$$

Equation: $Y = \square X + \underline{\hspace{2cm}}$

____. Slope = \square (\bigcirc , \triangle)

*Substitute into Slope-Intercept Form: $Y = mX + b$ and solve for b.

$$\triangle = (\square \cdot \bigcirc) + b$$

$$\triangle = \underline{\hspace{2cm}} + b$$

$$\underline{\hspace{2cm}} = b$$

Equation: $Y = \square X + \underline{\hspace{2cm}}$
